

Cambodia community microgrids

Thanks to Okra's new DC mesh grid microgrid network, integrating both existing distribution, local power generation and storage, and smart data software, nearly 150,000 ...

Small scale micro-grids and renewable energy generation offers a cheaper, faster alternative to grid expansion. CORE has the potential to provide a practical solution to energy supply while increasing ...

While all three countries have high renewable energy potentials, Indonesia has very high coal and also significant gas and oil production. Laos and Cambodia satisfy their energy demands mostly by ...

Several mini-grids are up and running providing access to reliable electricity to homes in remote off-grid villages, such as indigenous communities in Ratanakiri province. In evenings that were once dark, ...

In Cambodia, floating villages on the Mekong River face unique challenges regarding energy access. These communities often rely on diesel generators, which are not only costly but also contribute to ...

The Ministry of Mines and Energy (MME), with support from the Electricity Authority of Cambodia (EAC) and the United Nations Development Program (UNDP), recently energized the remote villages of ...

This demonstration project focuses on two key areas of clean energy: energy efficiency (EE) in buildings and solar microgrids for rural electrification. Energy efficiency in buildings can contribute to slow ...

With Okra, the extra power that's not being used by one home can be shared with the community meaning more people will have access to energy for all their needs: lights, fans, pumping water and ...

Solar microgrids for electrifying remote villages is a carbon-neutral solution and address the lack of cost-effective and feasible electrification options for 237 remaining remote communities without access to ...

Learn how Okra Solar provides low cost electricity in a rural Cambodian village with DC mesh microgrid networks.
