

Can off-grid solars store energy

Why do people use grid-based energy systems?

But these systems are also used by people who live near the grid and wish to obtain independence from the power provider or demonstrate a commitment to non-polluting energy sources.

Is a stand-alone energy system a good idea?

For many people, powering their homes or small businesses using a small renewable energy system that is not connected to the electricity grid -- called a stand-alone system -- makes economic sense and appeals to their environmental values.

What equipment do I need to install a solar power system?

In addition to purchasing photovoltaic panels, a wind turbine, or a small hydropower system, you will need to invest in some additional equipment (called "balance-of-system") to condition and safely transmit the electricity to the load that will use it. This equipment can include: Meters and instrumentation.

How much does a stand-alone power system cost?

In remote locations, stand-alone systems can be more cost-effective than extending a power line to the electricity grid (the cost of which can range from \$15,000 to \$50,000 per mile).
