What happens if a solar panel is broken?

Common causes of solar panel damage are falling objects, thermal stress, and micro-cracks and scratches. A broken solar panel may continue to work, albeit at a reduced efficiency. Broken solar panels pose a serious fire and safety risk and must be removed and replaced. Some companies can fix broken solar panels, but this is costly.

Do cracked solar panels work?

Cracked panels work if we define a working panel as one that produces a current. At least most of the time, cracks don't damage the solar cells themselves. These cells are among a solar panel array's most critical components. Even if a solar cell has been damaged, that doesn't compromise the entire panel.

Can a broken solar panel be replaced?
