

# Community Solar Power Generation Engineering Company

What is community solar?

Community Solar is Defined as... Community solar, also known as shared solar or solar gardens, is a distributed solar energy deployment model that allows customers to buy or lease part of a larger, offsite shared solar photovoltaic (PV) system and receive benefits of their participation.

How many community solar projects are there?

Currently, there are 110 community solar projects within 33 utility service territories across 11 states. Customers still receive credit reflected on their utility bills. The solar system is typically sited on a nonprofit or government building, adding to the "community" nature of the project. What if I move within utility district?

Who are the subscribers of a community solar project?

The subscribers are the individuals, businesses, nonprofits, or local governments, that purchase a share of the electricity generated by the community solar project. A community solar project is not located at the house or business where the subscribers use electricity.

Who can participate in community solar?

Customers who do not own their homes, do not have space to install solar, or do not have access to capital can usually still participate in community solar. All community solar programs serve an exclusive set of subscribers within a utility or community choice aggregation service territory. Participation in community solar is always by choice.
