

BRUSSELS, Jan 22 - Wind and solar power produced more electricity than fossil fuels in the EU for the first time last year, data published on Thursday showed, indicating the bloc's...

The EU's electricity transition continued at pace in 2024, as solar overtook coal for the first time and gas declined for the fifth year in a row.

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, and what still needs to happen?

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

Solar is the fastest growing energy source in the EU and is cheap, clean and flexible. The cost of solar power decreased by 90% between 2010-2023, according to the International Renewable Energy ...

Turbines spinning in the wind and photovoltaic panels lit up by the sun generated 30% of the EU's electricity in 2025, according to an annual review.

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power.

The European Union plans a major increase in solar PV capacity from 263 GW today to almost 600 GW by 2030. If nothing changes, this expansion will be based almost exclusively on solar ...

EU electricity solar panels
