

The first of its kind, this study offers an overview of the photovoltaics and battery storage market in Germany. It provides the latest statistics on the PV market and battery storage systems, along with ...

The German Parliament (Bundestag) has now approved a legal amendment that would classify battery, heat, and hydrogen storage as privileged developments in non-urban areas under ...

A successful energy transition will require a variety of storage systems to absorb electricity during peak times and release it when needed -- for example in the evening and at night.

In March 2025, Germany's largest battery storage system - located in Bollingstedt, Schleswig-Holstein - was connected to the grid. It delivers 103.5 megawatts of power and has an ...

High and further increasing volatility of power prices due to the expansion of renewables on the one hand and significantly decreasing prices for battery cells in recent years on the other hand ...

Analysis by pv magazine shows almost 2.1 million battery storage systems (BESS) are now in operation in Germany. The latest figures for this year are 362,537 systems with a power ...

Almost 600,000 new stationary battery storage systems were installed across Germany in 2024, increasing the country's storage capacity by 50 percent year-on-year, according to preliminary ...

The reform elevates legal certainty regarding the privileged treatment of thermal storage facilities, hydrogen storage facilities, and large-scale battery storage systems in outer areas ...

Energy storage has become a strategic pillar for Germany. In 2024, nearly 600,000 new stationary battery storage systems were installed in the country, according to data from the German ...

Battery storage systems are booming - but how can they be commercially successful? Insights into marketing, risk management and market opportunities for BESS in Germany.
