

Grid Management Micro Application

What is a microgrid management system?

Leverage situational awareness of asset and multi-site grid operations to support decision making. Microgrids allow the local grid to function independently during interruptions or outages in the larger grid. Discover how AspenTech Microgrid Management System helps you efficiently manage and operate your own electrical grid.

What is a microgrid controller & energy management system modeling?

Controller and energy management system modeling. Many microgrids receive power from sources both within the microgrid and outside the microgrid. The methods by which these microgrids are controlled vary widely and the visibility of behind-the-meter DER is often limited.

What is microgrid control - a Sicam application?

Microgrid Control - a SICAM Application ensures reliable monitoring and controlling of microgrids. It protects your independent power supply from blackouts and balances out grid fluctuations and fluctuations in power consumption. Spectrum Power MGMS is a software solution for optimal microgrid management and control.

What is a microgrid & how does it work?

Microgrids contain all the elements of complex energy systems, they maintain the balance between generation and consumption, and they can operate on and / or off grid. They are ideal for supplying power to remote regions or locations with no connection to a public network.
