

In Section 8, we discuss the challenges and opportunities of those p-n junction heterostructure devices towards the practical application in photovoltaic technology.

Abstract This study explores a van der Waals heterostructure (vdWH) PtS₂/MoSi₂P₄ as a potential candidate material for sustainable energy applications in thermoelectrics and ...

Among the solar cells based on crystalline silicon (c-Si), silicon heterostructure solar cells (silicon heterojunction, SHJ) distinguish themselves through their particularly high efficiency rates of more ...

Constructing two-dimensional/three-dimensional (2D/3D) heterostructures can effectively regulate crystallization and suppress defect formation for developing high-quality THP thin films.

Developing efficient crystalline silicon/wide-band gap metal-oxide thin-film heterostructure junction-based crystalline silicon (c-Si) solar cells has been an attractive alternative to the silicon thin film ...

The design of a hybrid concentrator-planar photovoltaic module based on heterostructure solar cells: A3B5 triple-junction and Si-HJT is presented. The results of initial ...

Interface engineering plays a critical role in advancing the performance of perovskite solar cells. As such, 2D/3D perovskite heterostructures are of particular interest due to their ...

Here, we review the different types of p-n junction heterostructures based on their device geometry and specifically their corresponding application in photovoltaic solar cells. In Section 3, the ...

“Our study has shown that spatial and time-reversal symmetry can be flexibly controlled by artificial structures, enabling a variety of optical responses and current generation that have not been...

These structures are called van der Waals heterostructures (vdWHs). The vdWHs have been used in several electronic and optoelectronic applications, including photovoltaic devices and ...

Heterostructure photovoltaic panels
