

# How big is the emergency 370 MHz fixed communication base station energy management system

The basic operation requirements and air-to-ground channel model of emergency cellular communication system based on large fixed-wing unmanned aircraft system are presented.

system based on large fixed-wing unmanned aircraft system are presented. The requirements are described in six categories: system architecture, UAV platform requirements, ...

Abstract: The basic operation requirements and air-to-ground channel model of emergency cellular communication system based on large fixed-wing unmanned aircraft system are presented.

The drone carries the BelFone digital Trunking base station, covering continuous air-to-ground signals for over 20 square kilometers and it is capable of accommodating hundreds of ...

The primary objective of the STEEP program is to develop a modular, vehicle transportable system that provides various forms of energy storage and management for tactical and mobile microgrids.
