

How to cut off the power supply of the base station signal line

A fully integrated signal and power isolation product that's now available brings a number of benefits to system design, including reduced board space, ease of certification, and simpler design.

Isolating signals is not enough to provide true isolation from noise and high voltages - the power supplies need to be isolated too. Designing an isolated power supply is often something that takes specialized skills and ...

A power supply for a radio absolutely must have a ground for this reason if it's powered from the high voltage mains supply. Note that the requirement for grounding has changed over the years.

In this article we'll show you how to build a Latching Power Switch Circuit, also known as an Auto Power Off Circuit. You can use this circuit to auto-power off the ESP32, ESP8266, Arduino, or any other microcontroller.

Multiple factors such as input and output voltage, output current, space constraints, efficiency, as well as the priority the designer places on each of these needs, determine which topology should be used.

Your 7300 can handle sudden power loss without damage but in day-to-day practice we recommend you employ the two step process of letting the radio power itself down first and then removing ...

Circuit breakers, by contrast, are designed to interrupt very high levels of electric current so they may safely cut off power in the event of a short-circuit fault. This next photograph shows a set of three disconnect switches ...

A power supply for a radio absolutely must have a ground ...

Emergency stop devices must be provided for any part of an installation for which it may be necessary to control the power supply in order to eliminate an unexpected danger.

Abstract: The design, installation, and protection of wire and cable systems in substations are covered in this guide, with the objective of minimizing cable failures and their consequences.

Grounding your high-powered amateur radio station is not just a safety measure; it is essential for maintaining optimal performance and longevity of your equipment.
