How do I measure PV current?

Note: You can more easily measure PV current by using a clamp meter, which I discuss below in method #2. That's right -- you can use a multimeter to measure how much current your solar panel is outputting. However, to do so your solar panel needs to be connected to your solar system.

How do you measure volts on a solar panel?

1. Locate the open circuit voltage (Voc) on the specs label on the back of your solar panel. Remember this number for later. For this method I'm using the Newpowa 100W 12V panel. It has a Voc of 19.83V. 2. Prep your multimeter to measure DC volts. To do so, plug the black probe into the COM terminal on your multimeter.

How do I test a 18V solar panel voltage output?

To test a 18V solar panel voltage output directly, put your solar panel in direct sunlight, set your multi-meter to the DC "volts" setting.

How do you test a solar panel with a multimeter?

How to Test a Solar Panel with a Multimeter Your multimeter is your best friend when testing solar panels. You can use it to check: Here's how: Multimeter -- I recommend getting one that is auto-ranging. Also, a simple voltmeter won't work here. You need a multimeter that can measure both volts and amps.
