What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

Should you install solar panels on your roof?

Installing solar panels on your roof isn't just about securing them in place--it's also about getting them up there without breaking your back (or the panels). If you're planning to DIY your solar project, make sure you consider this part of the process.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.

How do you install a solar roof?

Installation involves drilling through shingles into rafters and sealing with flashing. Standing seam metal roofs are ideal for solar installation, using non-penetrating clamps that attach to the seams. Corrugated metal requires specialized brackets secured with galvanized screws. Clay, concrete, and Spanish tiles present unique challenges.
