

# Is the amount of solar power generation in the north large

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...

In the first half of 2025, solar and wind together accounted for 91% of all new U.S. power generating capacity, continuing solar's dominance as the largest source of new electricity on the grid.

Solar power installation in North America is extensive, reflecting significant growth and investment in renewable energy. As of 2023, approximately 165 gigawatts (GW) of solar capacity ...

California leads as the top solar state. With over 54 GW of solar installed, enough energy to power over 15 million homes. Texas has the fastest growing solar economy with the largest utility-scale solar and ...

Find and download resource map images and data for North America, the contiguous United States, Canada, Mexico, and Central America. View an interactive map or download ...

In 2024, a new solar project was installed every 54 seconds, totaling 5,561,319 solar energy systems in the U.S. 12 Solar has added the most generating capacity to the grid for the last five years.

Solar is the leading resource for permitted plants, accounting for more than 70% of the 78,039 MW of permitted generation capacity. Wind and natural gas account for another quarter of capacity in this ...

In 2024 solar power grew 27% and wind power grew 8% compared to 2023 levels. California and Texas led in solar power. Together, these two states generated 41% of all U.S. solar ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

This report summarizes the latest statistics on solar power capacity by state and highlights the top U.S. states in solar power generation.
