Malta's electro-thermal energy storage system is built upon well-established principles in thermodynamics. When charging (taking electricity from the grid) the system converts electricity to ...

As of 2017, most of the electricity generated in Malta was from natural gas, with oil as a backup. Natural gas has only been used for generation on Malta since CCGT systems were installed at Delimara Power Station in 2015, before which oil was the main fuel used. Oil has been the primary fuel for electricity generation for many decades before 2015, although Malta also possessed coal generation capacity from 1980 until 1996. Renewable energies have a small but growing share of the electricity generation mix.

The power plant was a flagship Labour Party policy in the 2013 election, promising cheaper bills and cleaner energy. However, the project became central to Malta's political corruption ...
