

It presents a techno-economic comparison between the deployment of solar home systems to each residence and the supplying power from either a centralized roof-mounted or ground-mounted hybrid ...

The German-Namibian collaborative project PROCEED is investigating options for an efficient, sustainable and renewable energy-based power supply in Namibia via so-called island grids.

Stand-alone microgrid hold a primary solution for electricity and water supply in remote areas access to National grid is not possible. This paper presents a detailed optimal sizing and economic ...

The German-Namibian collaborative project "PROCEED" examines options for using off-grid hybrid energy systems to establish an efficient and sustainable power supply in Namibia that is based on renewable ...

This pre-feasibility study outlines a bioenergy electrification project in Namibia using Nopal-derived biodiesel to power micro-grid systems optimized by AI and ML on the AWS platform.

Due to the widespread use of direct current (DC) power sources, such as fuel cells, photovoltaic solar (PV), and other DC loads, high-level integration of various energy storage systems, including batteries, ...

The International Energy Agency (IEA 2020) highlights that modern energy services are crucial to human well-being and to a country's economic development. To aid the progression to modern energy services, the ...

A careful assessment is necessary for planning the microgrids, which can be tested using a faithful hardware-in-the-loop simulator. The idea of this thesis is to develop a rural microgrid in Namibia utilizing typhoon HIL.

By using a mixed-method approach, the research combines quantitative and qualitative data to offer a comprehensive analysis of these two mini-grid systems of Namibia.

The study focused on established hybrid mini-grid models in Namibia, specifically the Tsumkwe and Gam solar power plants designed for community-scale electrification, which are the only two main ...
