

Frequent power cuts in Northern Cyprus have reignited debate around energy security. The way forward lies in renewables and cooperative planning.

The DYNAMO project aims to develop a decentralized platform for energy exchange in microgrids, which will be implemented in a pilot location by the Electricity Authority of Cyprus, promoting the ...

Our range of innovative microgrid controllers offer control, monitoring and management solutions for distributed energy resources, featuring versatile solutions for the integration and management of any ...

Northern Cyprus faces unique energy challenges due to its geopolitical status and reliance on imported fossil fuels. This article explores how cutting-edge emergency energy storage applications can ...

In this paper, a review of recent developments in rural electrification through micro-grids is presented. This work first lays the background on the challenges hindering the mass deployment of ...

With solar irradiation levels hitting 1,750 kWh/m² annually sunlight intensity that rivals California's Central Valley, Northern Cyprus should be leading Mediterranean renewable adoption.

The Low Voltage Experimental Microgrid Laboratory (LVEM lab) at the FOSS Centre of the University of Cyprus (UCY) is a flexible and scalable microgrid testing, demonstration and R& D platform for smart ...

The study aims to reveal the prominent strategic energy alternatives for Northern Cyprus (NC) in its aspiration to transition from fossil fuels to solar energy/clean energy/renewable energy ...

Now, the convergence of modular battery technology, AI-driven management systems, and innovative financing is giving rise to a new model--villages can operate resilient microgrids ...

The DYNAMO project, led by Electi Consulting Ltd and Frederick Research Center, will create a pilot scheme with the Electricity Authority of Cyprus to enable prosumers to share and trade ...

Northern cyprus rural microgrids
