

# Nuku alofa s new solar system

In an incredible breakthrough, a team of international astronomers have for the first time ever witnessed the birth of a planetary system beyond Earth's sun that could one day resemble our ...

Astronomers have witnessed the birth of a solar system beyond our own for the first time.

The observations, published in the science journal Nature, show a glowing, lightning bug-like system against the dark void -- a cosmic nursery where planets may one day emerge.

Around a Sun-like star just 1,300 light-years away, a family of planets has been seen in its earliest moments of conception.

In a stunning picture taken by the ESO's Alma telescope network, the emerging planetary system resembles a lightning bug glowing against the black void.

In our Solar System, the very first solid material to condense near Earth's present location around the Sun is found trapped within ancient meteorites. Astronomers age-date these primordial ...

In a cosmic first, scientists watched planet-forming materials begin to solidify around a newborn star, offering a peek into what our Solar System may have looked like at birth. It's a stunning replay of planetary evolution, just 1300 light-years away.

For the first time ever astronomers have witnessed a budding star system emerge for the cosmic fog. Full Story: <https://>

The outer solar system, where Pluto resides, is the new frontier for exploration. Astronomers have been finding other worlds out there, in regions such as the Kuiper Belt and the ...

CAPE CANAVERAL, Fla. (AP) -- Astronomers have discovered the earliest seeds of rocky planets forming in the gas around a baby sun-like star, providing a precious peek into the dawn of our own ...
