

FuturaSun provides a complete range of modules for revamping photovoltaic systems, with all the certificates required by GSE for renovation works. Contact us.

To address this issue, an on-site renovation technology for PV panels has been developed, which involves pre-deposition diagnosis and polydimethylsiloxane (PDMS) film ...

Photovoltaic revamping is a fundamental practice to extend the lifespan of solar plants, improve their performance, and ensure compliance with current standards. Additionally, it allows installations to be ...

Photovoltaic Revamping represents an innovative and advantageous solution to optimize existing Photovoltaic Systems which, due to the passage of time, have lost efficiency or present ...

This guide was created to help those who own a photovoltaic system - residential or commercial - to understand if it is time to intervene, how to do so, and what benefits can be ...

Do you need to replace an out-of-production solar panel? Discover our photovoltaic revamping service: we faithfully replicate modules no longer on the market to ensure the continuity of your system.

The aim of the present study was to propose a cost framework for calculating the optimal renovation period of the solar photovoltaic modules, and to find which parameters are most relevant ...

Repowering is the process of revitalizing and modernizing an existing photovoltaic plant. Instead of building a new facility from scratch, repowering seeks to optimize and improve the power generation ...

As solar plants get old, their output degrades. It often makes sense to invest in reversing this degradation, which occurs via a process known as solar repowering. This catch-all term ...

But what happens to systems installed 10 or 15 years ago, which are now starting to show signs of aging? The answer is called photovoltaic revamping: a technical intervention that allows you to ...
