

In the hunt for sustainable energy, solar power has emerged as a front runner for supplying part of the world's energy needs. And Will Tingle has been finding out how three species of ...

SpaceTech has shipped the first four solar array panels for the European Space Agency - ESA PLATO spacecraft mission to Thales Alenia Space. These panels are being developed in a cooperation of ...

Researchers at the Fraunhofer Institute for Solar Energy Systems ISE have unlocked the secret behind the butterfly's iridescent blue wings, applying its photonic brilliance to create...

Sparkwing solar arrays offer up to 200 W/m² power output, are scalable for small satellites, and feature lightweight carbon-fibre panels. Designed for LEO missions, they support fast, reliable deployment.

Scientists developed new solar panels using morpho butterflies' blue iridescent colouring characteristics. Research conducted by Fraunhofer ISE scientists successfully reproduced 3D ...

We manufacture sets of solar array panels and can build them into a deployable solar array wings. We have experience with constellation level production including 38 plus satellites.

The quick summary: New multicolored solar panels inspired by butterfly wings can now seamlessly blend into buildings while maintaining 95% efficiency, enabling widespread adoption of ...

Researchers mimicked these structures and placed them silicon-based solar panels, to help reduce light reflection. If less light is reflected, that means more of it can be absorbed, increasing the overall ...

It is optimized for LEO missions requiring power levels between 100W and 2000W, and bus voltages of 36V or 50V. We offer more than twenty different panel dimensions, which can be configured into ...

Photovoltaic and solar thermal systems are not always considered aesthetically enhancing to a building. The coloured modules, however, being developed at the Fraunhofer Institute ...

Photovoltaic wing panels
