

Proportion of other investments in Greek energy storage projects

According to IPTO data, curtailments reached 228 GWh in 2023, soared to 900 GWh in 2024, and already hit 975 GWh in the first five months of 2025. The total for the year is projected to ...

Although renewable energy sources (RES) have dominated the country's energy mix in recent years, the cuts in production demonstrate that investments in photovoltaic and wind farms ...

The pileup of proposals for wind and solar power plants in Greece bolstered the interest in investments in pumped hydropower storage facilities to balance the output from the two ...

According to latest data, it is estimated that 46.6% of the scheduled PV capacity will have been funded by the RRF, while 28.5% of the scheduled onshore wind capacity will have also been funded by the ...

Even though electricity storage is recognized as a prerequisite for the decarbonization of the power sector, the development of storage facilities is still facing legal/regulatory barriers and investment ...

While Greece currently has virtually no utility-scale battery storage capacity installed, the country's project pipeline points to explosive growth in the coming years.

Greece's National Energy Plan (ESEK) states that high-RES penetration should be accompanied by the development of required storage (mainly battery and pumped storage ...

Institutional investors and infrastructure funds are financing long-term storage and hybrid renewable-plus-storage projects in Greece as balancing capacity demand rises. The top 10 Greek energy ...

Investors in hybrid projects -- pairing renewables with batteries -- complain that rules are still evolving, creating uncertainty about revenues. Market operators argue that unless Greece ...

A new study by the Center for Liberal Studies (KEFIM), in collaboration with the EPICENTER think tank, highlights the urgent need for investment in energy storage and the ...
