

# Science and Technology Museum Solar Power Generation

Hosted on the Canada Museum of Science and Technology, this marks OREC's first net metered solar project. This 215 kW project will produce a projected 230,000 kWh of clean energy, directly ...

Learn how solar power works, from the photovoltaic effect to AC conversion, with clear explanations of clean, renewable solar energy and panel technology.

Australia's largest museum group, sitting at the intersection of the arts, design, science and technology, engaging communities with contemporary ideas.

If the up-front costs fall, this has the potential to be revolutionary: an average person cannot own a coal-fired power station, but they could run their own solar farm or own a solar panel ...

LITTLE GEM - The first electric car in the world that was designed to switch between batteries and hydrogen fuel cells instantly, at the flick of a switch, is on permanent display at Herstmonceux ...

At the heart of Shanghai, SJTU is more than a university--with its academic prestige, cutting-edge research, culture of innovation, and vibrant campus life, it serves as a launchpad for global minds.

Discover how OREC and the Museum of Science & Technology are tripling solar energy capacity, marking a milestone in community-owned solar energy.

The WEG Science and Technology Museum was upgraded with the installation of a photovoltaic system capable of supplying 70% of the electricity consumed by the building! ...

Michael Jantzen's Solar and Gravity Powered Art and Science Pavilion treats that visibility problem as a design challenge. The conceptual structure combines a public exhibition space under ...

The wind and solar power plants, which operate on the roof of the museum, present the society with an increasingly more important alternative source of energy every day.
