

This paper demonstrates a facile solar steam generator for the generation of high-temperature steam at ambient pressure. The steam generator consists of a coiled copper tube (CCT) ...

The following sections will delve into how solar-driven technologies, particularly solar power towers and SSCPV systems, can be harnessed to optimize high-temperature hydrogen ...

In this study, linear Fresnel solar collectors and high-temperature heat pumps driven by photovoltaics are considered heat sources for steam generation in industrial processes. Energetic ...

This study proposes and investigates a novel solar power tower-based tri-generation system producing electricity, hydrogen, and green ammonia through integrated thermodynamic cycles.

In this article, we integrate and demonstrate a system that generates solar electricity and high-temperature heat in a modular, small footprint, low cost, and high-efficiency design.

Solar Radiation STEG is a new low cost high efficiency solar conversion technology

In this work, we demonstrated a passive solar thermal device mostly built from low-cost off-the-shelf components capable of delivering saturated and pressurized steam to drive sterilization cycles even ...

Because of the harsh working conditions of high temperature, high pressure and non-uniform high-intensity solar radiation, the solar receiver can be easily damaged or even has safety...

Two methods by which an sCO₂ heat pump can be combined with an sCO₂ power cycle for CSP are described and techno-economic results are presented. Results indicate that these systems can ...

Solar high temperature and high pressure power generation
