

With a robust pipeline of solar tenders across the GCC and North Africa and declining levelized electricity costs (LCOE), the utility segment will remain the backbone of solar PV deployment in the ...

In this study, we look at the progress made by the countries in the region, specifically in the solar and solar-related manufacturing segment. The Middle East is pushing for renewable ...

Wood Mackenzie forecasts the Middle East and North Africa region will emerge as a tariff haven and overtake Southeast Asia as a top solar export hub, becoming the primary exporter of...

The Middle East and North Africa (MENA) region is emerging as a "tariff haven," with potential to overtake Southeast Asia as a top solar export hub, based on a new report.

Leading global solar producers have announced plans to build new manufacturing factories in the Middle East. This move reflects a major shift towards clean energy and local ...

This comprehensive map encompasses the entire value chain, from polysilicon production to module assembly, highlighting the Middle East and Africa's growing stature as vital ...

From 2022 to 2023, China's exports of solar modules to the Middle East and North Africa consistently exceeded 10 GW, with rapid growth in Saudi Arabia and the UAE.

In 2022, renewable energy capacity in the Middle East surged by 11.2% compared to 2021, marking the second-largest percentage increase of any region that year. Investing in solar power is contributing ...

Explore how the Middle East is accelerating its role in the global energy transition by localizing solar PV manufacturing. This paper examines national strategies, industrial policy, and ...

In 2022, renewable energy capacity in the Middle East surged by ...

With projections indicating that solar manufacturing capacity could reach up to 44 GW by 2029, MENA is poised to potentially surpass Southeast Asia as a leading solar export hub.

Solar panels exported to the Middle East
