What is utility scale solar?

Utility scale solar refers to large solar photovoltaic (PV) systems that generate electricity to be fed into the electrical grid. Compared to residential or commercial rooftop solar installations, utility scale projects are ground-mounted systems that range in size from 5 megawatts (MW) to over 1 gigawatt (GW).

How does utility scale solar work?

These power plants use photovoltaic (PV) panels that convert sunlight into electricity, which is then sent to an inverter that converts the direct current (DC) to alternating current (AC) for use in the electrical grid.
