

Solar power station closures

One of the most ambitious solar projects in history is quietly heading for shutdown after just a decade of operation. The Ivanpah Solar Power Facility in California's Mojave Desert was once...

A California power utility is seeking to end a contract early, leading to the closure of the world's largest solar power plant on the California-Nevada border.

For the last decade, drivers on Interstate 15 heading through the Mojave Desert between Los Angeles and Las Vegas have passed by the massive Ivanpah Solar Electric Generating System.

Once a breakthrough in solar-thermal power, the facility faces closure due to high costs, environmental concerns, and shifting technology.

California built a \$2.2 billion solar thermal project in the Mojave Desert in the early 2010s, with 75% of it funded by the Obama administration through loan guarantees. The project, the ...

Ivanpah Solar Facility was designed to provide power via the sun. Then the technology improved and Ivanpah, with its bird killing mirrors, prepared to shut down.

What was once the world's largest solar power plant of its type appears headed for closure just 11 years after opening, under pressure from cheaper green energy sources.

Headlines have been circulating major news outlets around the impending closure of the Ivanpah Solar Power Facility, a \$2.2 billion project that began construction in 2010 and has been ...

This shutdown not only marks the end of an era but also highlights the rapid evolution in solar technology and the ongoing quest for more efficient energy solutions.

In this article, we will delve into the circumstances surrounding the shutdown and explore the implications for concentrated solar power (CSP) technology and renewable energy strategies ...
