

# Solution to overvoltage of solar inverter

Why is my solar inverter spiky?

Severe over-voltage: The inverter has completely shut off as the voltage is past the threshold for extended periods of time Moderate over-voltage: The voltage is on the edge of the threshold and the inverter is turned off for a very short period only to turn back on; thus the spiky solar profile. What can you do to resolve this?

How can a solar PV distribution system be improvised?

The voltage profile of the system can be improvised by installing a predetermined capacity of solar PV system. However, the distribution system will experience overvoltage when the solar PV capacity installed is more than the local loads.

Does solar analytics detect over-voltage issues?

Depending on how long the system is turned off due to the over-voltage issue, Solar Analytics will detect it either as a zero production fault or an under performance issue. In both cases, we will notify you depending on its severity. Some examples of over voltage issues will look like on your dashboard can be seen below.

Can a solar installer increase the voltage threshold?

Show your solar installer your energy data and they will request to increase the voltage threshold. This is more of a temporary fix but is generally a much quicker resolution.
