

What happened to the photovoltaic panels not being connected to the grid

Is a solar panel system still connected to the electric grid? Find out why a photovoltaic (PV) system may or may not be connected to the grid.

A solar panel will not turn solar energy into direct current until there is a circuit. If there is no circuit, the solar panel will just "sit there" as the photons will not be converted into electricity.

Is your solar system not living up to expectations? Find out why and how to fix it with our expert troubleshooting guide. Get your panels back on track!

Common issues are zero power and low voltage output. Below we will describe basic steps in troubleshooting a PV array. Quality solar panels are built and guaranteed to produce power ...

When no load is connected to a solar PV system, the generated electrical energy has nowhere to go. This can result in voltage spikes within the PV modules, potentially causing overheating and damage ...
