

# Which generator cabinet set is the best to use

What type of generator do I Need?

For domestic use, up to 18 kW, you will need a single-phase generator set, except possibly for some very energy-intensive equipment such as heat pumps. For professional use, you will probably need a three-phase generator set to supply machines that require more power. Some three-phase generator sets are equipped with single-phase outlets.

How to choose a generator set?

It will also be necessary to define the motor type, for example a gasoline engine if you are looking for a small compact generator set, a diesel engine if you are looking for a large generator set or a gas or turbine engine if this energy source is available and you want a more economical and less polluting set.

How safe is a generator set?

The generator set must be able to provide the peak power consumed by all the equipment that needs to start at the same time. For resistive equipment (lighting, television, small electrical appliances, etc.), a safety factor of 30% must be added when determining the power of the generator set.

Which generator is the best?

We feel that the WEN generator is the overall best generator for most users since it provides a reasonable amount of power in an extremely compact and lightweight package. Your email address will not be published.
